

Session 1

1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm)

A program is a set of instructions written in a programming language that tells a computer or mobile device how to perform a particular task. Programs are created to solve problems, process information, and make different applications work properly. For example, in **Instagram**, programs are used to display posts and reels, manage likes and comments, send messages, and recommend content according to a user's interests. These instructions work together in the background to provide a smooth and useful experience to the user.

2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.
Hint: Think of languages like Java, Python, and JavaScript.

1. **Java** – Usually **compiled**. Java source code is compiled into bytecode, which is then executed by the JVM (Java Virtual Machine).
2. **Python** – Usually **interpreted**. Python code is generally executed by the Python interpreter, although it is first converted into bytecode internally.
3. **JavaScript** – Can be **both compiled and interpreted**. Modern JavaScript engines often use Just-In-Time (JIT) compilation to improve performance.

Session 1

3. Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

START

Open BookMyShow App

Select City

Select Movie

Select Theatre and Show Time

Select Seats

Confirm Booking Details

Make Payment

Is Payment Successful?

→ No → Try Payment Again

→ Yes ↓

Booking Confirmed

Receive Booking Confirmation / Ticket

END

Session 1

- 4. Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.**

Algorithm: Ordering Food on Swiggy

1. Start the Swiggy app on your mobile phone.
2. Enter or select your delivery location.
3. Search for the restaurant or food item you want to order.
4. Select a suitable restaurant from the list.
5. Choose the food items you want to order.
6. Add the selected items to the cart.
7. Open the cart and check the order details and total amount.
8. Enter or confirm the delivery address.
9. Select a suitable payment method.
10. Review the order and click on the Pay option.
11. Complete the payment using the selected payment method.
12. After successful payment, the order is confirmed.
13. End.
